PROFESSIONAL EXPERIENCE

• Founding Member

Cartonify

Jan 2025 - Present

Bangalore, Karnataka

- Built and deployed machine learning models for real-world use cases such as image classification and text summarization using Python, scikit-learn, and PyTorch.
- Worked with a team to clean and preprocess large datasets (CSV, JSON, image formats), improving model accuracy by ensuring better data quality and feature selection.
- Integrated trained models into backend APIs using Flask and FastAPI, allowing real-time inference for users through web and mobile applications.

SWE

TrybookAI.com

Jan 2025 - June 2025

Bangalore, Karnataka

- Built and scaled the backend infrastructure for a document automation platform from scratch — including user auth, tenant-aware APIs, background workers, PDF generation, and deployment — now used by 30K+ monthly users.
- Architected and deployed production infrastructure on Kubernetes with Prometheus, Grafana, and HSM-based secure telemetry.
- Designed asynchronous job queues using Celery and Redis to handle high-volume PDF generation, with real-time job tracking via WebSockets; reduced time-to-response by 70 percent under load.

Software Engineer Intern

SeaArt AI

Jul 2024 - Dec 2024

Remote, Singapore

- Developed backend services for a digital art platform in Flask, including media upload APIs, image rendering jobs, and asset delivery; enabled seamless file handling and CDN caching to support large art uploads.
- Optimized PyTorch and TensorFlow models for faster rendering, achieving 40% speed gains and smoother UX for 10K+ users.
- Wrote scalable API endpoints with rate limiting, added Swagger documentation for frontend integration, and configured Nginx with HTTPS + caching for better load times.

NOTABLE PROJECTS

• Terminal Fx - Quant Algo Terminal(Jane Street Hackathon)

Mar 2024 - Present

Tech Stack: WebSocket, Python, Go, FastAPI, PostgreSQL, TimescaleDB, Backtrader, Kafka, Docker

Project Details

- Architected and built a scalable AI customer support SaaS platform as a cloud-native microservices ecosystem , using an event-driven architecture with WebSockets and Redis to deliver real-time features like live agent tracking and instant message status updates.
- **Implemented an event-driven architecture** with WebSockets and Redis Pub/Sub for scalable message delivery, live presence tracking, and instant status updates.
- Developed a cloud-native microservices ecosystem with PostgreSQL, Redis, and Celery for asynchronous task processing and seamless service integration.

• Fortexa.tech – Crypto High Frequency Trading Algorithm

Feb 2025 - Present

Pandas, NumPy, SciPy, LSTM, Random Forest, Gradient Boosting, Flask, AsyncIO, SocketIO, lack-Scholes

Project Details

- Developed a personal project to explore algorithmic trading, implementing strategies like mean reversion and momentum using real-time Binance data.
- Built and backtested machine learning models (LSTM, Random Forest) to predict market movements.
- Engineered an event-driven architecture using Python, Flask, and WebSockets to create a real-time dashboard for portfolio tracking.

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, TypeScript, C
- **Frameworks:** NestJS, FastAPI, Flask, React Native, Next.js
- **Cloud/DevOps:** Docker, Kubernetes, AWS, Redis, PostgreSQL, CI/CD
- **AI & Systems:** PyTorch, OpenCV, NLP, Computer Vision

EDUCATION

Degree	Institute	Board / University	CGPA/Percentage
Bachelor CS	IIT, Guwahati	IIT	8.2 (Till 2nd Sem)
Senior Secondary	VS Niketan Secondary School	National Education Board	88.88%

AWARDS AND HACKATHONS

- **Solidus Ai Tech Hack-AI-Thon-Layer2:** Third Runner-up among national finalists
- **Google Cloud AI for Impact Hackathon (APAC):** Shortlisted among Top 4 teams in Asia
- **Head of Website Department:** Lead the development for sports council event
- **Google Startup Grant:** Received US 450k from Google for AI research and developmet
